Proposal about education and fake news

To whoever this letter may concerns,

Thank you very much for taking time out to read this during such a busy schedule. I understand our nation currently have been facing a crisis for fake news and competition between foreign expat. I'd like to propose a solution for using Media . The United Kingdom has been another country like ourselves who consistently challenged by Russia's spies as well as fake news. Ukraine and China had faced many examples but often decided to close their door for globalization which will weaken their people as time goes.

The critical factor why Fake news work, is because of majority public comprehend identity through impression. I apologized in advance if I have misused my word, but the closest academic description will be " prejudice". People tend to believe only the first thing they read and no longer willing to explore more to know if there are any other versions of the same topic that they know. This has very much responsibility from our education; because our education system has become entirely intellect oriented . True Intellect is like an autopsy for knowledge; it's good to break down all layers to see the core, but also know the time and place to use it. However, right now exams seem to be competing who have a better memory to remember all the data from a textbook.

please don't misunderstand me; I fully support to bring our next generation to be smarter and wiser. The problem is the SOP did not fully reach its potential deal with many factors; teachers can be one reason, parents' misleading can be one. But the main problem is still the education system because it takes away children's curiosity. The intense interest of longing to know the truth has already taken away from them, how will they learn to express themselves or learn problem-solving. Currently, all children understand what is in the textbook, but not experiencing it. They will not feel any empathy until they put their feet into the same shoes, this isn't the intellect that can help our future.

When you teach children that a Knife is good or bad, this is going to be a big madness. A knife is only a knife; it depends on whose hand and how the person uses it. A good Jacket may be trendy, but it will become useless in summer, a beautiful T-shirt may create a good style, but you will die if you only wear a T-shirt in winter.

In the United Kingdom, Media are open source for knowledge, during the afternoon you may find broadcast for educating how to do properties business, deductions skills and critical thinking. They are one of those countries who are worried about treason, yet until today revolution is still impossible in Britain despite the fact, their public's intellect and quality are very impressive. Such example can be visible even in New York. We have most expat in history to start a company in our nation, but not much of us who had started a company who hire the expats, we shouldn't close our mind but to learn from them. Only open-mindedness can lead us to better future, never the other way around. Most people tend to run away what had won over them but refuse to let go of ego to learn from what is better for them.

We may have people who think " why do we need to improve? Why do I need to know? " but here's the thing. They can close their mind like a cave man and take life for granted, but the world is going globalization, they cannot stop others from coming in to compete.

I may be wrong, but sincerely I think it is better to catch up with the future , rather than the future catch up and push us. When there are no competition people, tend to bully or pick on those who are different, but when the competition starts to fall in those people don't have a solution and often just wait to be occupied. Those who once have the heart to contribute slowly lost faith and washed away by these people.

Do any of them understand that Intellect can autopsy a flower, break it into small atoms to know every detail of it, but it cannot let you experience what a flower is? Once a great man, Albert Einstein had mentioned : We cannot solve our problems with the same thinking we used when we created them. Close-mindedness is what brought us to this current situation; we cannot repeat the same history over and over again.

I hope the school will consider to let children have more experience, more curiosity and more expressing of themselves, as well as the public . If one doesn't know how to express, they can never be able to sharpen their perception, without keen perceiving skills ,they can't be accurate in their learning nor critical thinking .eventually we will all grow old , children are the future of the country and I genuinely hope history will not repeat in the next generation, they deserve better. I hope this proposal will be put into consideration.

Thanks for reading
Best regards

Sincerely,

A humble citizen.
