Name: DATOS CONCEPCION

Received: 28 Feb 2018

To the members of the Committee: From our organization "Datos Concepción" (Argentina) we are developing a series of documents and technologies designed to detect fake news and generate literacy on the subject, especially for the education system. Specifically, among the initiatives that we have in progress, we are interested in promoting the following:

- Interactive guide with necessary steps to detect a false news (to spread through social networks)
- Chatbot thought as a friendly guide to check if an information is fake or not. - A website designed to house documents, projects and tools that are being created in the fight against fake news > To promote these initiatives, we estimate a necessary budget (additional to our contributions) of USD 12,000 and a development time of six months. All these projects will begin to be developed on March 22nd in an event destined to address the fake news (www.fakenews.com.ar) We already welcome the initiative promoted by this Committee and we invite its leaders to relate the experience in Governments and organizations in Latin America to promote similar initiatives in the region.

A brief description of the organisation:

"Datos Concepción" is a team dedicated to Data Driven Journalism / Training in Media Innovation and Transparency Projects. Is a small team whit four youngs members, with experience in technological develops related to open data, open gov, civic tech, corruption cases and data visualization. Site:
